The invention set forth in claims 1 to 5, 7 and 9
to 12 is novel and involves an inventive step.

Document 1 discloses a portable telephone with a
non-contact IC card function, wherein the antenna for the
non-contact IC card is configured by disposing a
conductive antenna, which is formed from a conductive
line that has been wound into a coiled shape, around the
periphery of the structural object that functions as a

portable telephone (paragraph 5 and fig. 3).

Document 2 discloses a feature of using a loop coil antenna with a conductive line that is disposed in a spiralling shape so as to surround the entire perimeter of the side surfaces of the carrying case (the case member) as the antenna for carrying out non-contact communication (paragraphs 3 to 6 and 12, and fig. 1, 3 and 4).

Document 3 discloses the feature of producing an antenna coil from a flexible substrate (a bendable insulating substrate) with a conductive pattern printed thereupon (paragraphs 19 and 23, and fig. 8).

Document 4 discloses the feature of embedding the loop antenna coil within the case member (paragraph 2).

Document 5 discloses the feature of configuring so that the data communication device has a non-contact IC card function (a wireless tag function) and a read/write function (paragraphs 13 and 14).

Document 6 discloses the feature of using different antennas according to the intended application (paragraphs 20 to 22 and fig. 1 and 2).

Document 7 discloses a communication device that has a non-contact IC card function, an antenna for a portable telephone, and a portable telephone function, wherein said communication is also equipped with a main body member and a display unit that is attached to the main body member in a manner such that it is possible to open and close the display unit relative to the main body member (paragraphs 15 to 21 and fig. 1 to 5).

However, the feature of arranging the loop coil antenna so that at least one portion of the conductive line surrounds the side surfaces other than the two main

surfaces among the surfaces that constitute the case member in order to resolve the technical issue of ensuring that the loop coil antenna exhibits a uniform sensitivity throughout both surfaces of the case member and the technical issue of enlarging the region with a sensitivity that is sufficient to allow communication is not disclosed in documents 1 to 7, and would not have been obvious to a person skilled in the art.
